(12) Liquidity risk management

Liquidity risk refers to the risk that the Bank will be unable to secure necessary funding due to deteriorating financial condition or a similar reason, and will therefore be unable to meet cash flow requirements, or that it will suffer a loss because it is compelled to pay interest rates significantly higher than normal rates to secure funding.

With the objective to determine precisely and timely the location and amount of liquidity risk, and to execute proper measures against such risk, the Bank has set out the liquidity risk management framework and documented such in its fundamental policies, detailed rules and procedures at the Head Office (the "HO") and Hong Kong office levels.

Following the Head Office's policies and procedures whereby the global rules and the corporate level monitoring and management structure are set out, the Hong Kong office's policies and procedures are formulated to outline the liquidity strategy and goals specific to the local business environment and conditions.

At the Head Office, senior management including the Board of Directors, the President and members of the Market Risk & Asset and Liability Committee exercise significant management oversight regarding liquidity risk management. At Hong Kong Office, the liquidity risk management strategy is carried by the Hong Kong Treasury Division, while the Risk Management Division is responsible for the monitoring, reporting, and analyzing liquidity risk.

The Hong Kong Market Risk & Asset and Liability Committee comprising key members from local management, Hong Kong Treasury Division and Risk Management Division, conducts meeting on a regular and when necessary basis to review and deliberate important liquidity risk management matters.

It is the funding strategy to hold appropriate amount of highly liquid assets in order to meet with the liquidity needs in time of liquidity strain. It is also our prudent policy to treat intra-group companies' transactions same as other third party transactions and must be included in the calculation of open gap positions and monitored within the funding gap limits.

Below are the major liquidity risk control carried by the HK office:

- Convening regular Market Risk and ALM Committee Meeting;
- Setting early warning indictors for identifying potential vulnerabilities in liquidity risks;
- Monitoring liquidity ratios against internal and regulatory requirements;
- Setting up funding gap limits to control cash flow mismatches;
- Perform regular rehearsal for the measures as defined in the contingency funding plan;
- Performing regular stress tests, which include general market crisis scenario, institution-specific crisis scenario, and a combination of both scenarios;
- Performing intra-day liquidity management, and securing sufficient intra-day funding through various means including prearranged daylight facility, intra-day repo, etc.;
- Monitoring the movements, durations profile and proportion of each major item on the balance sheet;
- $\ Monitoring \ diversification \ of \ deposit/funding \ balance \ to \ avoid \ over-reliance \ on \ single \ depositor/funding \ source; \ and$
- Managing the short term and long term funding by way of ratios between borrowing and lending.
